QA Internship

Assignment (#2)

Palestine Purchase Certificate

- **Good to Know**

  The Purchase Certificate issued by Palestine is a type of electronic certificate that serves as proof of purchase for goods and services in Palestine. It is an electronic document that is issued to buyers after they have completed a transaction with a seller through the platform.

  The main purpose of the Purchase Certificate is to provide a secure and reliable means of verifying the authenticity of transactions and ensuring that both buyers and sellers are protected from fraud and other types of illegal activities. It is particularly useful for international trade, as it helps to facilitate cross-border transactions and provides a reliable means of verifying the authenticity of goods and services.

- **Requirement:**

  We should be able to create 'Purchase Certificate SQL Table' based on Palestine state standards, so that a user can generate a Purchase Certificate later from this table, this table should handle all the data included in the 'Purchase Certificate', you are allowed to create any others SQL tables you need.

  The user uploads the date as the following format (OrderId, ParcelCode, PurchaseCertificateNumber, ParcelPrice, ShipDate), we drop any row that's doesn't have the OrderId & PurchaseCertificateNumber.

  But the system should handle the PurchaseCertificateNumber & OrderTotalPrice which equal to the total sum or all parcels' prices we already have, if we received a row without PracelPrice, so the price for that parcel equal to zero else if received a row without parcel code but we have a price this will be the price for the order.

- **Now, you were asked to:**
  1. SQL script file containing the table creation and simple data insertion statements, use any SQL application you prefer.
  2. Your ER model for the database architect.
  3. Some of TSs\TCs we can later use to test this program "don't use formal STP, only TSs\TCs description without any steps).
  4. Schedule a review meeting once you finished.

Good Luck 😊
